The importance of finding mechanisms to help educators use the science they need to teach in their classes is critical. This year's Alliance ongoing theme of solutions related to climate change is far from just understanding the impacts of the region's changing climate. The video presentation by the Alliance staff member on working on climate change issues in San Diego. Working with Project Updates

Pat Harcourt presented on PAT Harcourt is the Science Education Research and Development Manager at the Climate Change Education Partnership (CCEP) and leads on the development of a five-year action plan to integrate climate change science into formal and informal Science education in Delaware and Maryland, and focused on the Climate Change Education Framework. The framework is designed to guide education professionals in developing and implementing climate change education initiatives that are aligned with the Next Generation Science Standards. She shared insights on how the framework can be used to develop and implement climate change education initiatives in K-12 settings.

The proposal for the panel session that would be presented at the Alliance's Fall meeting, titled "Advancing Climate Change Education through Collaboration: Lessons from the NOAA Foundation's Climate Change Education Program," was discussed. The panel session would feature short presentations by representatives from the NOAA Foundation, CEC, and the Climate Change Education Partnership Alliance (CCEP) about their efforts to advance climate change education through collaboration. The panelists would share their experiences and lessons learned, as well as strategies for building effective partnerships.
